

4 Key Considerations to Transition into an Increasingly Digital Mine.

PART 1

SourceOne®

Eclipse Mining Technologies

When planning the transition to a digital mine, most decision makers focus on picking the right technology for the job.

Technology is important but we need to go beyond the typical hardware and software features and look for technology that creates a virtual teamwork environment.

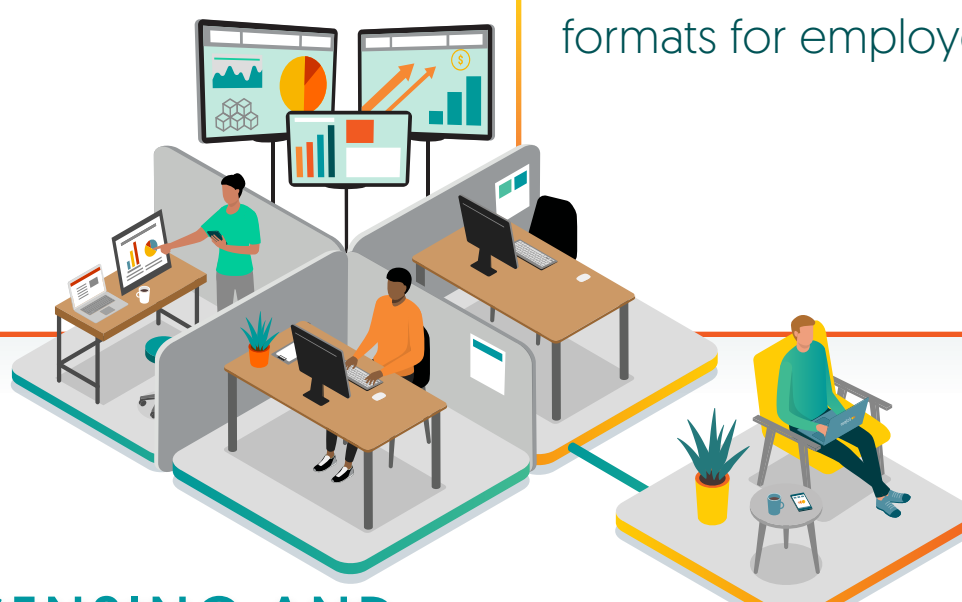

There are 4 considerations when transitioning to a digital mine with a virtual teamwork environment:

1. ACCESSING DATA
2. LICENSING AND PERMISSIONS LIMITATIONS
3. TASK ALIGNMENT
4. INSTITUTIONAL KNOWLEDGE

Let's dig deeper into each topic.

ACCESSING YOUR DATA

CURRENT TECHNOLOGY	DIGITAL TRANSFORMATION TECHNOLOGY	ADDITIONAL BENEFIT
Mine sites generate large volumes of data in many different formats. Transferring the data between different systems can be cumbersome .	Transition to a platform to host your data on a single internal/cloud server. This will improve transfer speed and performance when accessing the volume and different data formats for employees.	Ability to work offline and have your changes tracked and integrated when reconnecting to the platform if connectivity is an issue.

LICENSING AND PERMISSIONS LIMITATIONS

CURRENT TECHNOLOGY	DIGITAL TRANSFORMATION TECHNOLOGY	ADDITIONAL BENEFIT
Existing software restricts access and availability of who can use or access the software.	Transition to a simple "seat-based" license system based on the total number of users.	The platform administrator can adjust user permissions as needed to control the platform's access and security.

Discover more about **Task Alignment** and **Institutional Knowledge** in part 2.

The SourceOne® industry platform integrates all of your operation's data, tracks all the changes and context, and facilitates collaboration and transparency in a multiuser environment through a centralized access point.

Are you ready to learn how the SourceOne® industry platform is the best choice for transitioning into a digital mine?
