

According to [Adrian Beer, CEO of METS Ignited](#), you should not go out and “hire 500 or 600 IT software engineers for your own organization at the expense of all the vendors out there trying to help”

SourceOne® EKPS is built for you!

Why invest valuable time and resources trying to build a data team when an enterprise data solution built by mining and data experts already exists?

Using SourceOne EKPS is easier than building your own data team

Here's Why:

SAVE YOUR RESOURCES

SourceOne is the equivalent of a data team and is ready for implementation when you are. SourceOne saves you money, which you can reinvest into your core operational activities.

WE'RE HERE TO HELP

Our SourceOne technology and service partners make integrating your entire mining organization easy.

EXPERT APPROVED

SourceOne was developed by mining and data experts that understand the data generated at a mine site.

ANYONE CAN USE IT

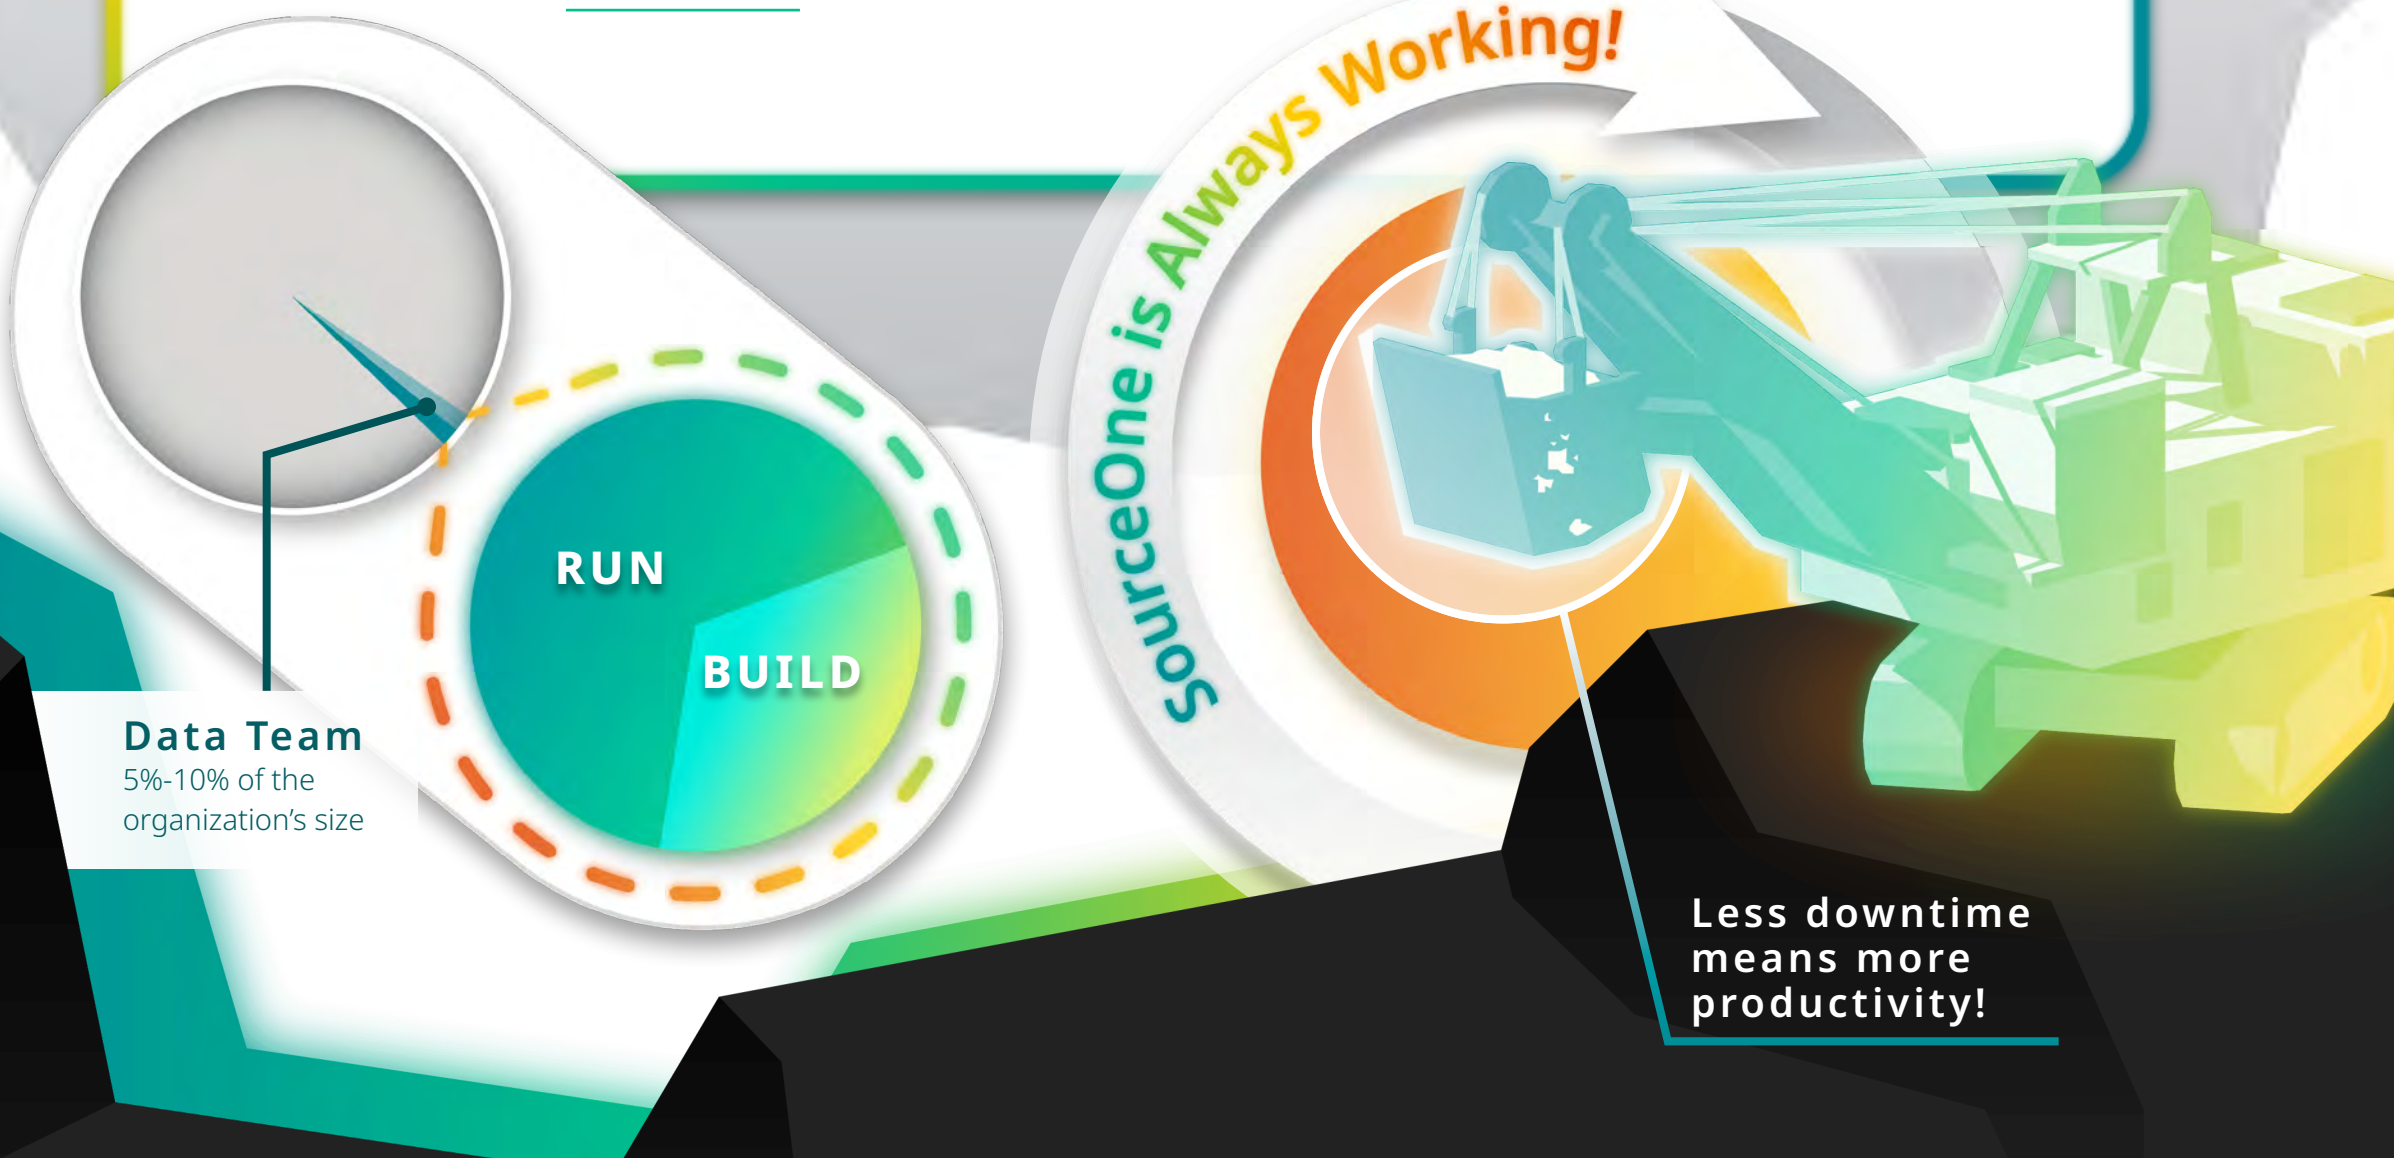

You don't have to be a data expert. SourceOne is user-friendly. With its low/no-code technology, it gives any user the power to create and visualize data.

LET'S TALK NUMBERS

A data team should represent 5% - 10% of the organization's size. It should run 2/3 of the time and build 1/3 of the time. With SourceOne, there is no downtime or organization sizing ratio. Which means it's always working for you.
